Message from the Honourable Minister Clement Maring

On behalf of the Ministry of Education, Science & Technology (MoEST), I am pleased to present the 2015 edition of the *Central Equatoria Education Statistical Booklet* of the Republic of South Sudan (RSS). It is the 8<sup>th</sup> in a series of publications initiated in 2007, with only one interruption in 2014, a significant achievement for a new nation like South Sudan.

The purpose of the booklet is to provide a detailed compilation of statistical information covering key indicators of South Sudan's education sector, from pre-primary to higher education. It reports the results of the data gathered from the Annual Education Census (AEC) carried out by the Directorate of Planning and Budgeting's Data and Statistics Unit (DSU), which sits within the MoEST and operates the Education Management Information System (EMIS), in collaboration with State Ministries of Education (SMoE).

To plan and manage our education system effectively, South Sudan needs reliable and credible data. We need information about how the system is developing and changing over time, how different geographical areas vary across the country, and how South Sudan compares vis-à-vis its neighbours or countries facing similar socio-economic situations. The *General Education Act, 2012*, makes specific provisions in this regard:

*Art. 8 (Io): The National Ministry of General Education shall exercise and carry out the following roles and functions: [...] Conduct educational research to determine the quality of education system in South Sudan and use the results of such a research findings for planning purposes.*

By providing systematic and quality knowledge to education stakeholders about the status of the education system as a whole and the learning outcomes in the country, EMIS assists the Government of South Sudan (GoSS) in identifying education needs and priorities, and in designing appropriate interventions. EMIS also assists the Ministry and other relevant agencies in providing critical information to monitor our performance against key indicators of the Education for All (EFA) and the new Sustainable Development Goals (SDGs). Enrolment and intake rates, pupil-teacher ratios, gender parity, and access to learning materials, among other data, can help government and supporting agencies identify where to most effectively allocate limited resources in the face of competing priorities.

This year, as a result of insecurity in parts of the country, the Ministry conducted data collection across only 7 out of 10 states. Yet, we were able to reach out to more than 6,000 Head Teachers and over 7,500 schools and educational institutions. Additional data collection was carried out independently across 45% of all counties in the Greater Upper Nile (GUN) area, adding significant quantitative and qualitative insights about the state of education in emergency. Overall, despite significant implementation challenges, comparisons with 2013 and 2012 show that the 2015 data is coherent and of good quality. This is partly due to the comprehensive baseline exercise conducted in 2014, which consolidated the EMIS database as the most comprehensive list of all education establishments in the country, as well as school verification visits undertaken by Ministry officials.

Besides, in 2015, the long-awaited decentralisation of EMIS was initiated, with greater involvement of state ministries and county officials in the implementation of the AEC, and the piloting of data entry in Central Equatoria and Western Bahr-el-Ghazal states. The Ministry also made great strides towards increased ownership of EMIS by putting key staff on government contracts and ensuring that the new organisational structure of the Ministry encompassed the management and operation of EMIS at national and subnational levels. Additionally, for the first time, data analysis was conducted in South Sudan by the EMIS team, representing a great source of pride for the Ministry. These significant achievements demonstrate our commitment towards the sustainability of EMIS as captured in our long-term strategy for the expansion of decentralised activities and capacity building in all states, which is the most viable and effective way of raising and utilising resources over the long term.

This publication would not have been possible without the cooperation and support from the SMoE, county and *payam* Education Offices, and all the schools, centres, institutions, colleges, and universities across South Sudan. The dedication and hard work of the EMIS team and State Focal Points, County Education Directors, *Payam* Supervisors, and Head Teachers were crucial in increasing the education census coverage and in ensuring the quality of the information gathered. We also thank our partners, especially the European Union (EU) for its generous financial assistance, as well as UNICEF and Altai Consulting, for their continuous support in improving South Sudan's EMIS.

Sincerely,

A handwritten signature in black ink, appearing to read 'Clement Maring'. The signature is written in a cursive style with a horizontal line underneath.

Honourable Clement Maring  
Central Equatoria State Minister of Education, Science & Technology

## 1. INTRODUCTION

"We cherish education for all our people equally and aim to provide a life-long education of quality for all children, youth and adults of Southern Sudan; an education that is relevant and affordable based on the needs and aspirations of the people, to enable them to become responsible and productive citizens."

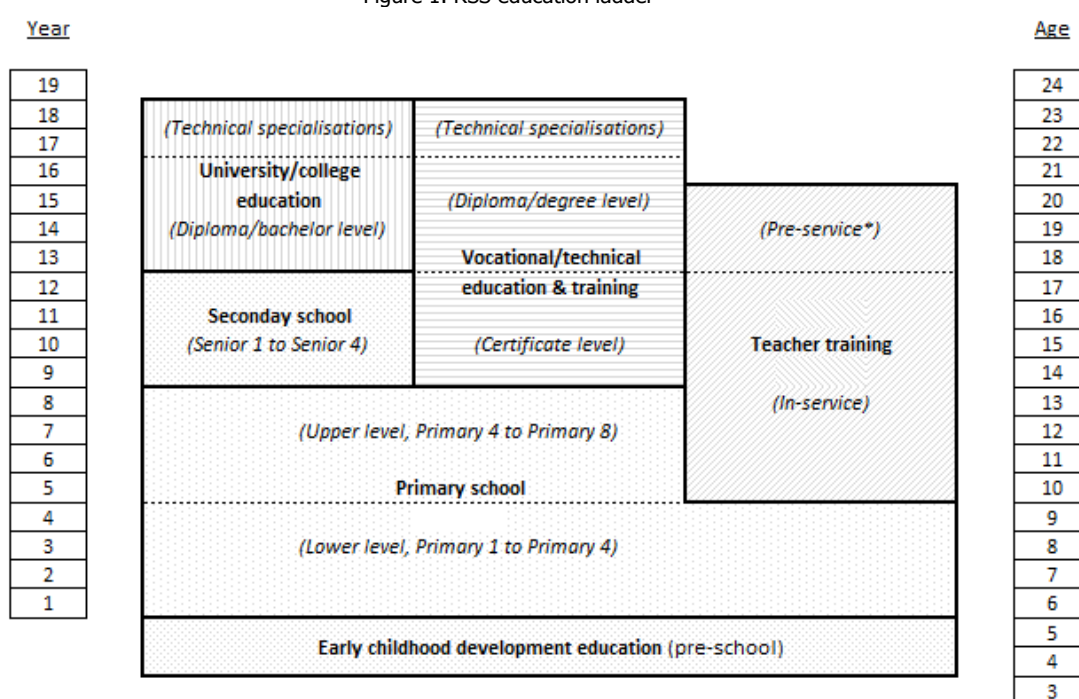

RSS MoEST mission, 1994

### 1.1. Background and Context

In the RSS, the majority of adults and children have not had the opportunity to attend school due to decades of civil war. During that time, the development of basic services was non-existent and accessing infrastructure was difficult. As a strategy to achieving its mission, the MoEST constructed a system of formal and Alternative Education Systems (AES).

The formal education ladder is an 8-4-4 system—that is, 8 years of primary education, 4 years of secondary education, and 4 years of higher education.<sup>1</sup> AES consist of 6 different programmes, including Accelerated Learning Programme (ALP) and Community Girls School (CGS), and offers flexible entry and exit points for children, youth, and adults. Teacher Training Institutes (TTI), through their in-service and pre-service training, help populate the teaching workforce. The Technical and Vocational Education and Training (TVET) prepares students with practical and applicable skills that will lead to employment via various programmes that range in length from months to years.

Figure 1. RSS education ladder

The GoSS set 2022 as the target for achieving Education for All (EFA). To this end, the Ministry is focusing on developing the education sector through 1) teacher education and professional development, 2) the implementation of new funding mechanisms to support schools and girls education, 3) development of AES with a focus on adult literacy and education for hard to reach children, and 5) capacity enhancement of education institutions.

The Ministry's main aim is to increase access to quality education and to promote equity. In order to facilitate the implementation of education reforms, the Ministry wants to build institutional and human capacity both at state and central levels, and at county, *payam*, and school levels. The Ministry is also working on improved partnerships among key stakeholders in education, including civil society actors.

Additionally, the MoEST is currently embarking on a very ambitious reform process, including the development of a new policy framework, the formulation of a new long-term strategic plan, a restructuring of the Ministry and related state Ministries, and the introduction of new minimum standards for operations. This will be followed by the development of new operational manuals and the introduction of a new performance management system aiming to improve the effectiveness and efficiency of Ministry operations, and ultimately the improvement of the delivery of education services.

While these ambitious goals will take time and resources to be implemented, a number of interim successes have already been achieved, including the setting up of a transfer system to send salaries and operating costs to states and counties, capitation grants to schools and TTIs, as well as the development of a new curriculum. Similarly, collecting credible and reliable education data through EMIS will help in strengthening existing systems and building new ones.

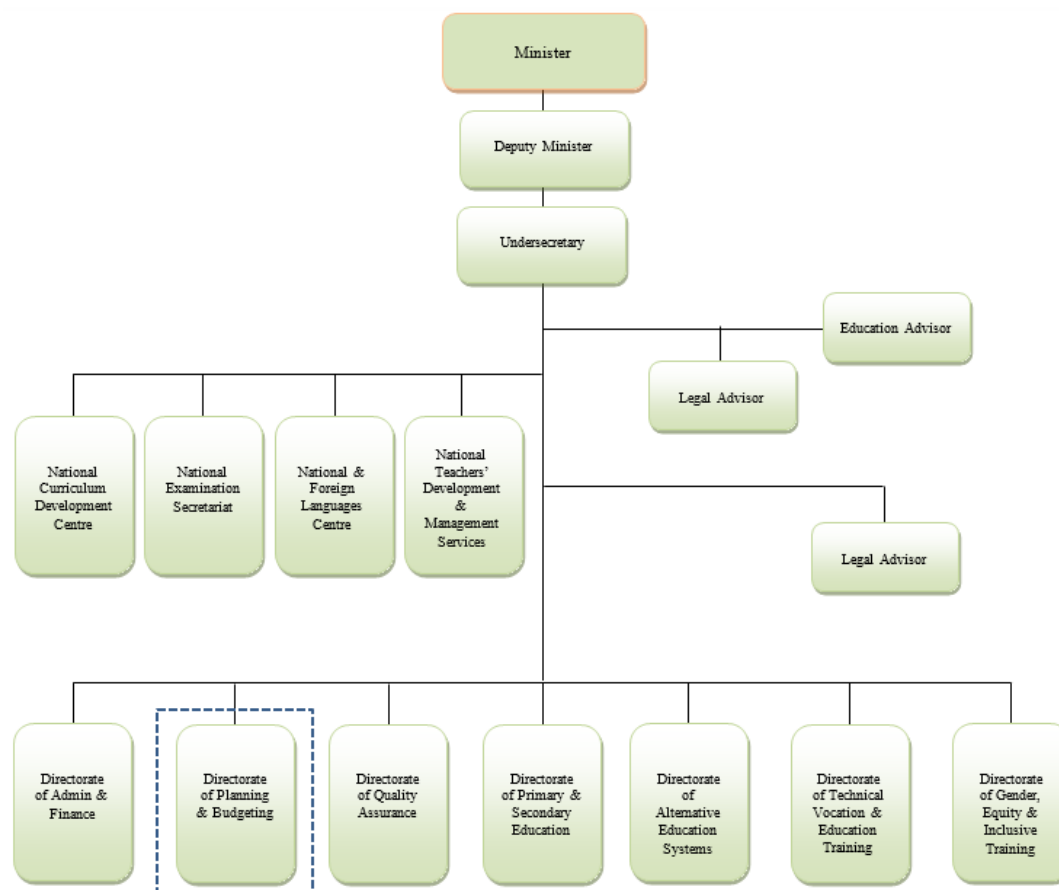

<sup>1</sup> Some university degrees take more than 4 years, including medicine, engineering, and other technical specialisations.

## 1.2. About EMIS and the Data and Statistics Unit

EMIS is a government programme housed within the MoEST, under the Directorate for Planning and Budgeting's DSU. EMIS facilitates information-driven policy discussions and decision-making by collecting, processing, storing, analysing, and disseminating education information.

The DSU is primarily responsible for conducting the AEC of all educational establishments in the country. The AEC covers all areas of the country's education system (pre-primary, primary, secondary, and AES) and has recently been expanded to include TTIs, TVET, and universities. The DSU also undertakes school mapping, field verification, and Information Communication Technology (ICT) preparedness activities, and provides oversight over all data collection activities implemented across the country.

Figure 2. Structure of the MoEST

## 1.3. History of EMIS

EMIS in the RSS has come a long way. During the decades of conflict in South Sudan, the Sudan People's Liberation Movement (SPLM) authorities together with development partners on the ground did not forget education, which was managed by the Secretariat of Education (SoE). In 1998, UNICEF, in collaboration with the SoE, contracted the African Education Trust (AET) to collect and compile data on primary education in rebel-held areas. Data was analysed and documented in a booklet entitled Schools Baseline Assessment (SBA) released in 2002.

After the signing of the Comprehensive Peace Agreement (CPA) in 2005, the SoE decided to expand the programme and initiated the first collection of EMIS raw data in 2005, thanks to the support of the Sudan Basic Education Programme (SBEP) funded by the United States Agency for International Development (USAID). In 2006, additional baseline data was collected through the Rapid Assessment of Learning Spaces (RALS). From 2006 to 2013, EMIS activities were supported by UNICEF through funding from various donors, with contribution from the government, and technically assisted by FHI360.

Since 2014, EMIS activities have been funded by the EU, managed by UNICEF, and Altai Consulting has been providing technical assistance with a key focus on decentralisation, ownership, and sustainability. Although no census was done in 2014 as a result of delays in resource mobilisation, a comprehensive baseline exercise was conducted in October 2014 to prepare for the 2015 census. The exercise consisted of assembling as complete a list of schools as possible from a variety of sources and verified through a combination of methods, including ground verification of 993 schools for which the data available needed to be confirmed.

Data collection for the 2015 census was completed between February and April 2015 across 7 states, with more than 6,000 Head Teachers being reached out to. This was followed by data entry from April to June 2015, including the verification of about 7,500 questionnaires and decentralised data entry centres in Central Equatoria and Western Bahr-el-Ghazal states. Between June and September 2015, for the first time, data analysis was performed by the EMIS team in South Sudan.

## 1.4. Relevance and Utilisation of EMIS Data

To plan and manage its education system effectively, South Sudan needs reliable and credible data. By collecting and providing systematic and quality knowledge to education stakeholders about the status of the education system as a whole and the country's learning outcomes, EMIS assists the GoSS in identifying educational needs and priorities, designing appropriate interventions, and allocating limited resources in the face of competing priorities. For instance, this year's EMIS data will notably be used as a key data source to inform the development of the 2015 Education Sector Analysis (ESA), which will in turn inform the proposed review of the Education Sector Plan (ESP).

EMIS also assists the Ministry and other relevant agencies in providing critical information to monitor progress against key targets of the EFA, the Global Partnership for Education (GPE), and the new SDGs, among others. When institutionalised and guided by a clear vision and strategy, EMIS has the potential to help policy makers manage an education system able to produce quality outputs.

## 1.5. EMIS Process

The "EMIS process" consists of five (5) steps:

- 1) Fieldwork planning:** Designing, reviewing, and printing of the AEC questionnaires, verifying the EMIS baseline list of schools, and preparing the schedules, budgets, and other necessary administrative and logistical arrangements.
- 2) Data collection:** Conducting training of Head Teachers on questionnaire completion, verifying the data through the *Payam* and County Education Offices (CEO) and SMOE, and retrieval of the completed questionnaires.
- 3) Data processing:** Entering of data into the EMIS database (including at decentralised level), merging of all data, and final data cleaning and verification prior to analysis.
- 4) Data dissemination:** Production of tools for distribution and use in education planning and management. The *Education Statistical Booklets* are such tools, along with other outreach activities at regional and state levels.
- 5) Data utilisation:** Series of training sessions that guide national, state, and county education agencies and their partner organisations on the application of EMIS data in building short-, mid-, and long-term strategic plans and budgets.

Each step requires extensive coordination with stakeholders at state, county, *payam*, and school levels, as illustrated below.

Figure 3. 2015 AEC Workflow

## 1.6. About the 2015 Booklet

As a result of insecurity and limited access across GUN areas at the time of data collection, **the 2015 AEC only covered 7 out of 10 states**. Additional data collection was undertaken independently in most of Jonglei and parts of Unity and Upper Nile, covering 45% of all counties across these three states. The results are presented in an annexed report using both quantitative and qualitative analysis.

EMIS data was collected from government schools as well as private and community-run schools. Overall, comparisons with previous such exercises suggest that the 2015 education statistics are coherent and of good quality. However, as there are no school registration and operational status reporting protocols, the DSU is not able to track all schools in South Sudan. The booklet reports unadjusted numbers.

When preparing for the 2015 AEC, there were 10,027 potential schools in the EMIS database. This corresponded to the baseline list, which included many schools that were thought closed or duplicates, plus a number of blank questionnaires filled in by schools not previously identified in any database. Of these, 2,444 belonged to GUN states, not analysed here, leaving 7,537 in non-GUN states. Of these, 332 were not distributed because the school was reported as not existing; 759 because the school was reported as closed; 597 because the school was identified as a duplicate; and 96 for other reasons (e.g. schools temporarily closed, schools opened but no pupils, etc.). This left 5,763 questionnaires distributed in the 7 non-GUN states. Of these, 5,223 questionnaires were filled, entered, and analysed. This represents 90.6% of questionnaires distributed to non-GUN states. 540 remaining questionnaires did not come back from the field, for the most part because the schools did not exist, were closed, or had already filled a questionnaire, and are listed at the end of the booklet.

Table 1: Questionnaires Status, non-GUN states

|                       | Qty   | Remains |       |
|-----------------------|-------|---------|-------|
| In baseline DB        | 7,537 |         |       |
| School does not exist | 322   | 7,215   | 4.3%  |
| School is closed      | 759   | 6456    | 10.1% |
| Duplicate             | 597   | 5859    | 7.9%  |
| Other reason          | 96    | 5763    | 1.3%  |
| <hr/>                 |       |         |       |
| Distributed           | 5,763 |         |       |
| Have data             | 5,223 |         | 90.6% |
| Missing               | 540   |         | 9.4%  |

For comparison, the 2013 AEC claimed a coverage rate of 98%, far above the 91% found this year. This can be explained by two factors: 1) in 2015, data was collected from many more schools than in 2013, suggesting that the coverage rate computed in 2013 was optimistic; and 2) a large part of the missing questionnaires were probably aimed at invalid entries (i.e., closed schools, non-existing schools, duplicates). The 2015 AEC process also included mechanisms to discard duplicates and record new schools. A new baseline list was prepared as a result, including a total of 5,883 operational schools. Given the volatility of the current context, further verification will be required on a regular basis, including additional field visits and cross-referencing with other databases such as the South Sudan School Attendance Monitoring System (SSAMS).

## 1.7. How to Read the Data in this Booklet

This booklet is a reference document for government and other relevant organisations, agencies, and individuals. Its purpose is to present a summary of the data that was reported by individual schools' Head Teachers and verified by its respective CEO and SMOE. The data consists of present and previous AEC data. Consistent updates are necessary to ensure their continued utilisation.

The booklet displays information in three ways: **1)** tables, **2)** graphs with numbers, and **3)** graphs with percentages. At the national and state level, ratios are derived from aggregate data, which lowers the margin of error. At the school level, however, data is more prone to errors given the potential risk of misreporting.

Two types of data were used in the compilation of this booklet: **1)** 2010-2013 AEC outputs and **2)** population projections based on the 2008 population data from the National Bureau of Statistics (NBS), which were provided as unadjusted and did not include migration estimates.<sup>2</sup> Additionally, the potential spillover effect of the conflict from GUN into neighbouring states, making some computations and comparisons with previous years more difficult (e.g. Gross Enrolment Rate, student flows). Finally, incoherent 2013 AEC data and the lack of 2014 AEC data made it even more complicated to perform certain calculations based on approximate estimates.

Electronic copies of this booklet and state booklets can be accessed at [www.southsudanemis.org](http://www.southsudanemis.org).<sup>3</sup> The DSU can also provide hard and soft copies upon request (see contact information on pg. 1 of this booklet).

<sup>2</sup> Population growth rates provided to calculate the 2015 education statistics have not been verified by the UNESCO Institute of Statistics (UIS).

<sup>3</sup> The EMIS website contains more up-to-date information as well as more dashboards based additional different extractions.

## 2. DEFINITIONS

### 2.1. Indicator Used to Measure Coverage

**2.1.1. Coverage Rate** refers to the percentage of “known” schools reached out to and accounted for in the AEC. For instance, a coverage rate of 90% means 90% of known schools received the AEC questionnaire, responded, and the completed questionnaire was entered into the EMIS database. “Known” schools include schools for which a reference exists in the database, a questionnaire was printed, and attempted to be delivered. Among these, “missing” schools did not return a questionnaire to the DSU, either because the school was not operational or because the school simply did not or could not return the questionnaire (for logistical or security reasons for example). Schools that confirmed they were out of operation were not included in coverage rate calculations, as well as schools yet to be identified and entered into the EMIS database. The AEC exercise discovers new schools each year. In 2015, the overall coverage rate was 91%.

### 2.2. Indicators Used to Measure Access

**2.2.1. Gross Enrolment Rate (GER)** is used to show the general level of participation in a given level of education. A GER value of 100% indicates that a country is, in principle, able to accommodate all of its school-aged population. The “official school-age” for primary education in South Sudan is 6-13, and secondary education 14-17. The formulas for primary GER and secondary GER are:

$$\text{Primary GER} = \frac{\text{Total number of pupils of all ages in primary school}}{\text{Population of ages 6-13 children}} \times 100\%$$

$$\text{Secondary GER} = \frac{\text{Total number of students of all ages in secondary school}}{\text{Population of ages 14-17 children}} \times 100\%$$

**2.2.2. Gross Intake Rate (GIR)** indicates the general level of access to primary education. It also indicates the capacity of the education system to provide access to P1 for the official school entrance age population. This rate can be over 100%, when the number of over-aged and under-aged children in P1 is excessive, relative to the children of the right age of admission. The “official primary school entrance age” in South Sudan is age 6. The formula for GIR is:

$$\text{GIR} = \frac{\text{Total number of new entrants of all ages in P1}}{\text{Population of all age 6 children}} \times 100\%$$

**2.2.3. Net Enrolment Rate (NER)** shows the proportion of children of school age who are enrolled in school. NER applies only to children of official school age. NER below 100% provides a measure of school age children who are not enrolled in school. As NER only accounts for students of “official school-age,” NER is always less than or equal to GER. The “official school-age” for primary education in South Sudan is 6-13, and secondary education 14-17. The formulas for primary NER and secondary NER are:

$$\text{Primary NER} = \frac{\text{Total number of pupils in school of ages 6-13}}{\text{Population of ages 6-13 children}} \times 100\%$$

$$\text{Secondary NER} = \frac{\text{Total number of students in school of ages 14-17}}{\text{Population of ages 14-17 children}} \times 100\%$$

**2.2.4. New Entrants** refer to new pupils of any age entering P1 for the first time in a school year. Entrants include pupils who have attended school elsewhere but are beginning P1 in a new school. Pupils who have left school but returned to school in P1 are also considered new entrants. Pupils attending P1 at the same school since the previous year are NOT new entrants; they are considered “repeaters” (further defined below). New entrants count is used to calculate the GIR and Net Intake Rate (NIR) (also further defined below).

“Am I a  
NEW ENTRANT?”

**YES**  
**NO**

I’m attending P1 for the very first time.  
I was in P1 last year at your school.

**2.2.5. Net Intake Rate (NIR)** shows the level of access to primary education of the eligible population of those with a primary school-entrance age. A high NIR indicates a high degree of access to primary education for children of the official primary school entrance age. For countries wanting to achieve the goal of universal primary education, a NIR of 100% is the ultimate objective. The “official primary school entrance age” in South Sudan is age 6. The formula for NIR is:

$$\text{NIR} = \frac{\text{Total number of new entrants of age 6 in P1}}{\text{Population of all age 6 children}} \times 100\%$$

GIR and NIR are useful when used in combination, as the difference between these two ratios indicates the rate of deviation from the official age intake.

### 2.3. Indicators Used to Measure Resource

**2.3.1. Pupil-Classroom Ratio (PCR)** measures the level of basic facilities available in terms of the number of classrooms in relation to the size of the pupil population. The higher the PCR, the lower is the relative access of pupils to classrooms. It is generally assumed that a low PCR signifies an environment more conducive to learning, likely in the long run to result in a better performance from pupils. To support the education reform towards providing all students with stable learning spaces, this report counts only permanent and semi-permanent classrooms in the calculation.<sup>4</sup> The formula for PCR is:

$$\text{PCR} = \frac{\text{Total number of students}}{\text{Total number of perm. and semi-perm. classrooms}}$$

**2.3.2. Pupil-Teacher Ratio (PTR)**, also known as the Student-Teacher Ratio (STR), measures the level of human resources input in terms of number of teachers in relation to the number of pupils. A high PTR suggests that each teacher is responsible for a large number of pupils; the higher the PTR, the lower the relative access of pupils to teachers. It is generally assumed that a low PTR signifies smaller classes, which enables the teacher to pay more attention to individual students, which will likely in the long run result in a better performance of pupils. The formula for PTR is:

$$\text{PTR} = \frac{\text{Total number of students}}{\text{Total number of teachers}}$$

**2.3.3. Pupil-Textbook Ratio (PTextR)** measures the level of learning materials available in terms of number of textbooks in relation to the number of pupils. The higher the PTextR, the lower is the relative access of pupils to textbooks. It is assumed that a low PTextR signifies a condition more conducive to learning, likely in the long run to result in a better performance of pupils. To support education reform towards providing all students with textbooks for core subjects, only English and Mathematics textbooks are counted in the calculation. The formula for PTextR for English/Math textbooks are:

$$\text{PTextR (English)} = \frac{\text{Total number of students}}{\text{Total number of English textbooks}}$$

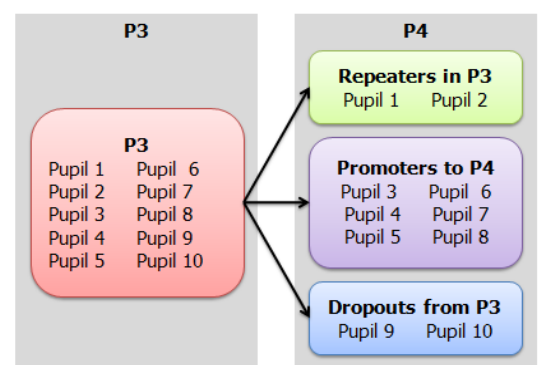

$$\text{PTextR (Math)} = \frac{\text{Total number of students}}{\text{Total number of Math textbooks}}$$

### 2.4. Indicators Used to Measure Student Flow

**DISCLAIMER:** As explained in Section 1.7, for truly accurate calculations of student flows, data over consecutive years is required. Since the AEC was not conducted in 2014, alternative formulas were designed to calculate student flows indicators. To compute them, variations between 2013 and 2015 were split equally between 2013-2014 and 2014-2015. For P1-P2, a value was computed for 2014, obtained by averaging corresponding values over the past 3 years.

**2.4.1. Dropouts** refer to pupils who have withdrawn (for any reason) from the school system without completing a given grade in a given school year. The distinction made between dropouts and repeaters was that while repeaters were not promoted to the next grade level in the following year, they did remain in the school system, whereas dropouts were considered to no longer be in the system at all.

$$\text{Cohort dropout count} = \text{Enrolment in cohort in } \gamma - \text{Enrolment in cohort in } \gamma + 1 - \text{Repeaters in cohort in } \gamma + 1$$

<sup>4</sup>Permanent classrooms refer to those constructed of bricks or cement. Semi-permanent classrooms refer to those constructed of mud.

**2.4.2. Dropout Rate** monitors education system coverage and student progression by measuring the proportion of students in a given cohort dropping out of—or leaving—the system altogether. The formula for dropout rate is:

$$\text{Dropout Rate} = \frac{\text{Dropouts in cohort in } y+1}{\text{Enrolment in cohort in } y} \times 100\%$$

**2.4.3. Promoters** refer to pupils who have moved on to the next grade level from one year to the next, ending up in one grade level higher from last year. By convention, a pupil in P3 last year should be in P4 this year. If a pupil has moved on to P4 for this year, the pupil is considered a promoter. The diagram below illustrates this scenario (see Figure 3 below).

**2.4.4. Promotion Rate** measures the phenomenon of pupils from a cohort moving up a grade, and its effect on the internal efficiency of education systems. It is one of the key indicators for analysing and projecting pupil flows from grade to grade within the education cycle. Promotion rate should ideally approach 100%; a low promotion rate signals problems in the internal efficiency of the education system. Decreasing promotion rates serve as an early warning that the system is experiencing capacity constraints. When compared across grades, the patterns can indicate specific grades for which there is lower promotion, and where a more in depth study of causes and possible remedies should be carried out.

$$\text{Promotion Rate} = \frac{\text{Enrolment in cohort in } (y+1) - \text{Repeaters in } (y+1)}{\text{Enrolment in cohort in } y} \times 100\%$$

**2.4.5. Repeaters** refer to pupils who have not been promoted to the next grade level from one year to the next, ending up in the same grade in the current year as they were in last year. A pupil in P3 last year should be in P4 this year. If the pupil has stayed in P3 for this year, the pupil is considered a repeater. The diagram below illustrates this scenario (see Figure 4 below).

**2.4.6. Repetition Rate** measures the phenomenon of pupils from a cohort repeating a grade, and its effect on the internal efficiency of education systems. It is one of the key indicators for analysing and projecting pupil flows from grade to grade within the education cycle. Repetition rate should ideally be 0%; a high repetition rate signals problems in the internal efficiency of the education system. An increasing repetition rate serves as an early warning that the system is experiencing capacity constraints. When compared across grades, the patterns can indicate specific grades for which there is higher repetition, and where a more in depth study of causes and possible remedies should be undertaken.

$$\text{Repetition Rate} = \frac{\text{Repeaters in cohort in } y+1}{\text{Enrolment in cohort in } y} \times 100\%$$

## 2.5. Indicator Used to Measure Gender Parity

**2.5.1. Gender parity index (GPI)** measures the relative access to education of boys and girls. It is calculated as the ratio of the number of female students enrolled at different levels of education to the number of male students in each level. To standardise the effects of the population structure of the appropriate age groups, the GPI of the GER for each level of education is used. A GPI of 1 indicates parity between the sexes; a GPI that varies between 0 and 1 typically means a disparity in favour of males; whereas a GPI greater than 1 indicates a disparity in favour of females. The indicator is an imperfect measure of the accessibility of schooling for girls because it does not allow a determination of whether improvements in the ratio reflect an increase in girls' school enrolment (desirable) or a decrease in boys' school enrolment (undesirable). It also does not show whether the overall level of participation in education is now lower or higher.

$$\text{GPI} = \frac{\text{Female Growth Enrolment Ratio}}{\text{Male Growth Enrolment Ratio}}$$

### 3. EMIS DATA SUMMARY, 2015

#### 3.1. Schools

**Number and % of schools per school type and ownership, 2015**

| Type         | Total        | Gov        |              | Non gov    |              |
|--------------|--------------|------------|--------------|------------|--------------|
|              |              | Count      | %            | Count      | %            |
| AES          | 302          | 137        | 45.4%        | 165        | 54.6%        |
| PPR          | 301          | 50         | 16.6%        | 251        | 83.4%        |
| PRI          | 566          | 305        | 53.9%        | 261        | 46.1%        |
| SEC          | 81           | 34         | 42.0%        | 47         | 58.0%        |
| TTI          | 4            | 2          | 50.0%        | 2          | 50.0%        |
| TVE          | 20           | 12         | 60.0%        | 8          | 40.0%        |
| UNI          | 11           | 1          | 9.1%         | 10         | 90.9%        |
| <b>Total</b> | <b>1,285</b> | <b>541</b> | <b>42.1%</b> | <b>744</b> | <b>57.9%</b> |

#### 3.2. Students

**Number and % of students per school type and gender, 2015**

| Type         | Total          | Male           |              | Female         |              |
|--------------|----------------|----------------|--------------|----------------|--------------|
|              |                | Count          | %            | Count          | %            |
| AES          | 12,673         | 6,129          | 48.4%        | 6,544          | 51.6%        |
| PPR          | 38,266         | 19,461         | 50.9%        | 18,805         | 49.1%        |
| PRI          | 194,230        | 101,255        | 52.1%        | 92,975         | 47.9%        |
| SEC          | 25,506         | 15,824         | 62.0%        | 9,682          | 38.0%        |
